The European standard for Powered Air Purifying Respirators is EN12941.

This standard defines 3 classes of performance. These levels are TH1, TH2 and TH3.

The numbers define *level of performance* (*Inward Leakage) & the strengths of the tubes and couplings.

Maximum Inward Leakage for the classifications are:-

TH1 = 10%

TH2 = 2%

TH3 = 0.2%

SIP PAPER Filters are TH2P (Particle Filter).

*Inward Leakage is defined as the combination of contaminated air that leaks through a respirator from various sources, including face seals, valves & gaskets and the penetration through the filter.
